Shipper Bulletin

Subject: Renewable Diesel in Heating Oil

Colonial has received shipper requests to add the allowance of up to 5% renewable diesel in heating oil. Based on the potential interface mixing of 61 and 63 grade which may add small amounts of renewable diesel content to heating oil and this request to ship heating oil blended with renewable diesel, Colonial is granting a waiver to allow up to 5% renewable diesel to be present in heating oil (Grades 77 and 88). The deadline for inclusion of this change was missed on our current filing which will be effective March 1. The product specifications will be updated to reflect this change on the next filing. The waiver is effective immediately. The waiver information is also included on the website to ensure parties are aware of the allowance.

Please contact the QA team if you have any concerns about this change.
